

Crop development report – Tett nang

June 2026

Ideal growing conditions prevailed during the first half of the month, with sufficient moisture and moderately warm temperatures. The second half of the month brought a heatwave and a lack of rainfall. On the morning of July 1st, 40 to 50 mm of rain fell - an amount not included in the June statistics. As a result, the situation has improved significantly once again.

The soil cultivation measures are largely complete. The pressure from fungal pathogens is low. Insect pests (aphids and spider mites) are under control.
