daily temperatures in June 2018

monthly temperature

monthly rainfalls

Further Information:

Development of hops is still about one week ahead. The plant stand is very inhomogeneous within the growing area, but in total average. The blossom began in all varieties.

Rainfall from June 28th and 29th with about 25 mm was very important, as the water deficit is still enormous.

Farmers actually spray against aphids and spider mite. Infestation with powdery mildew is higher than last year.
